

POWERDUMP MIXER

In September, 2000 Western Manufacturing brought productivity to a new level by introducing the first successful single engine mobile pump. The PREDATOR Pump equipped with the POWERDUMP mixer utilizes the pump engine as the power source for **mixing** and **dumping**.

The Powerdump has no equal. It's no wonder contractors are rapidly converting to this system.

A heavy duty low maintenance hydraulic motor gets rid of mixer Clutch, Transmission, and Engine while bringing the reliability of Hydraulics.

Easy access controls feature:

- A. Dump Control.
- B. Mix Control.
 - Forward*
 - Stop*
 - Reverse*
- C. Mix Speed Control.

Offset pivot point allows for **LOWEST** charging height available which combined with the hydraulic POWERDUMP system increases operator and crew's total productivity.

And the Oversized Hydraulic cylinder gives a reliable and even dumping movement which makes this machine the perfect tool for the most productive crew.
